Royal Australasian College of Physicians (RACP)

The Royal Australasian College of Physicians (RACP) represents almost 40,000 physicians and trainees across Australia and Aotearoa New Zealand and educates, advocates and innovates. The RACP plays a lead role in developing world best practice models of care and drawing on the expertise of our members. Beyond the drive for medical excellence, the RACP is committed to developing health and social policies which bring vital improvements to the wellbeing of our patients and the broader community.

Coronavirus (COVID-19)

The coronavirus disease, COVID-19, is an infectious disease caused by the SARS-CoV-2 virus. Most people infected with the virus will experience mild to moderate respiratory illness and recover without requiring special treatment. However, some people will become seriously ill and require medical attention. Older people and those with underlying medical conditions are more likely to develop serious illness. Anyone can get sick with COVID-19 and become seriously ill or die at any age.¹

RACP COVID-19 Expert Reference Group (ERG)

In March 2020, the RACP COVID-19 Expert Reference Group (ERG) was formed in response to the COVID-19 pandemic. The ERG presently includes broad expertise in its membership, including:

- College Policy and Advocacy Council
- Aboriginal and Torres Strait Islander representative
- Aotearoa New Zealand representative
- Australasian Faculty of Occupational and Environmental Medicine
- Australasian Faculty of Public Health Medicine
- Australasian Faculty of Rehabilitation Medicine
- Australasian Society of Clinical and Experimental Pharmacologist and Toxicologists
- Australasian Society of Clinical Immunology and Allergy
- Australasian Society for Infectious Diseases
- Australian and New Zealand Society for Geriatric Medicine
- Internal Medicine Society of Australia and New Zealand

¹ Coronavirus (who.int)

- Paediatric and Child Health Division
- Private Practice
- RACP Consumer Advisory Group
- Thoracic Society of Australia and New Zealand

In the immediate response to the COVID-19 pandemic, the ERG focused on protecting RACP members and staff, advising on the rapid transition of RACP staff to working from home, and advocating for the health and safety of Fellows, in particular on the availability of personal protective equipment (PPE).

As the pandemic continued, the ERG began to consider a substantial number of COVID-19 matters, which often require rapid response from the RACP. The ERG now regularly reviews and provides advice on government policies and resources and informs RACP representatives on various Government COVID-19 committees/taskforces, including the National COVID-19 Clinical Evidence Taskforce, COVID-19 General Practitioner Peak Bodies Advisory Group, COVID-19 Disability Advisory Committee, and Department of Health forums on the COVID-19 vaccine rollout.

The ERG members, and numerous RACP Fellows across the specialties, have contributed their expertise to the public health response to the COVID-19 pandemic, representing the RACP on a range of external committees and advisory bodies which oversee Government measures and response.

This document

This document provides an overview of the RACP's key positions in response to the COVID-19 pandemic, which have been developed in consultation with members.

The document is divided into five overarching areas:

1. Healthcare worker health and safety
2. Clinical care
3. Public health
4. Priority populations
5. Equity and health system capacity

We acknowledge and pay respect to the Traditional Custodians and Elders – past, present and emerging – of the lands and waters on which RACP members and staff live, learn and work. The RACP acknowledges Māori as tangata whenua and Te Tiriti o Waitangi partners in Aotearoa New Zealand.

1. Healthcare worker health and safety

The Hierarchy of Controls

The RACP guidance document on Workplace Risk Management provides guidance on how to implement the principles of infection prevention and control with respect to COVID-19 using the hierarchy of controls, a commonly understood framework for managing workplace health and safety risks. This aimed to assist workplaces to manage the risk of COVID-19 on similar terms as for any other workplace hazard. The *Application of the Hierarchy of Controls to controlling COVID-19* table provides examples of measures for consideration for controlling COVID-19 hazards, and the preferred order.

Table 1: Application of the Hierarchy of Controls to controlling COVID-19

This table provides examples of measures for consideration for controlling COVID-19 hazards, and the preferred order.

Most Effective	Example actions
Remove the potential for exposure to the the SARS-CoV-2 virus	<ul style="list-style-type: none"> Workers with any symptoms to get tested for COVID-19 and remain at home awaiting the result. Screen staff daily at the workplace (fever, symptoms) and send home and for testing if unwell. Remove vulnerable HCWs (as defined per the AFOEM or Australian Department of Health website) from high risk areas (e.g. dedicated COVID-19 wards, EDs, and ICUs to lower risk areas (e.g. non-COVID-19 general medical or surgical wards). Triage patients with respiratory symptoms and/or travel or contact history to dedicated assessment areas. Screen, restrict and manage visitors with respiratory symptoms. Do not perform non-essential higher risk procedures.
Substitution (Replace processes that create exposure to the SARS-CoV-2 virus)	<ul style="list-style-type: none"> Use teleconferencing / telehealth / virtual consultations and meetings. Use non-aerosolising techniques, equipment, and cleaning techniques where possible.
Engineering (Isolate people from the the SARS-CoV-2 virus)	<ul style="list-style-type: none"> Install perspex cashier spray guards and distancing spacers, create queue lines with spacing markers. Use airborne infectious isolation/negative pressure rooms (where available) per the relevant procedures. Exhaust room air via HEPA filters with frequent air turnover using fresh air rather than recycled air. Use closed system ventilators and suction, where possible. Where possible, move monitoring equipment outside patient rooms; otherwise, it should be specifically dedicated as such and remain in patient rooms. Aggregate (cohort) known cases in wards away from non-COVID-19 patients. Provide covers/booths over patients during transportation (where possible).
Administrative (Change how people work)	<ul style="list-style-type: none"> Implement non-engineering physical distancing measures (e.g. card-only payment). Regular hand hygiene with soap and water and/or hand sanitiser. Institute elevator, work break and routine training separation protocols. Encourage staff risk reduction behaviours when at home or in the community (e.g. social distancing, hand hygiene). Develop a sick employee policy and staff education on self-care and recognising early symptoms. Staff education on requirements for isolation following unprotected contact, know who to contact. Institute measures to prevent bringing the virus home (e.g. change and contain work clothes before leaving the workplace). Ensure staff are current on all immunisations (especially influenza). When higher-risk tasks are being undertaken, restrict number of workers in the room. Disinfecting protocols for cleaning in clinical and non-clinical shared areas, focusing on high use/high-touch surfaces. Policies on transfer of infectious patients.
PPE (Table 2) (Protect people where there is exposure to the SARS-CoV-2 virus)	<ul style="list-style-type: none"> Develop a respiratory protection program covering all aspects of selection, use, testing, checking and medical evaluation. Easy access to soap and water and obtain required PPE. Identify high and low risk tasks: select and use the most appropriate PPE for the identified level of risk (Table 2). Train in appropriate and effective PPE use, fit testing and checking depending on PPE type, cleaning and disposal. Stop at intervals to check PPE is being worn properly (e.g. use a spotter or buddy). Identify and manage any hazards associated with using PPE (Table 3)
Least Effective	

Personal protective equipment (PPE)

Throughout the COVID-19 pandemic the RACP has strongly advocated for access to and use of PPE for the health and wellbeing of health care workers.

“The Government must ensure that specialist physicians, as well as GPs, have access to PPE in order to protect themselves and their patients, many of whom are particularly vulnerable with serious, pre-existing chronic conditions. The inability of specialist physicians in private and non-hospital community-based practices to access PPE may lead to some services not being able to continue.”

In August 2020, a survey of RACP members revealed a significant proportion of members in public hospitals were resorting to buying their own PPE, with almost half of those who responded having

limited or no access to N95 grade masks and 11% with no access. The RACP called on the Government to urgently:

- Ensure frontline healthcare workers have access to necessary PPE and required training (in public and private hospitals as well as residential aged care settings).
- Ensure physicians and paediatricians working in private practice in the community can access the National Medical Stockpile for their PPE requirements.
- Provide transparent information about reserves in the National Medical Stockpile, including by jurisdiction.
- Extend PPE requirements for the use of N95 masks to aged-care facilities.

The RACP's statement on use of PPE recommends that healthcare workers, including aged care workers, should use surgical masks when at work, or N95/P2 masks when in contact with high risk patients or performing high risk (aerosol generating) procedures, together with other appropriate PPE as outlined by the most recent available advice from the Infection Control Expert Group (ICEG).

The RACP provided input into the Infection Prevention and Control Panel's guidelines on PPE (eye protection and masks), which have been adopted by the Australian Government. The guidelines on PPE have been extremely well received by healthcare worker groups as they constitute a significant improvement on previous advice in terms of recognising the need for healthcare workers to have access to P2/N95 respirators when they are providing direct patient care to patients with suspected or confirmed COVID-19 or are near patients with suspected or confirmed COVID-19. The guidelines also recommend a risk assessment – if it is concluded based on consideration of several factors including proximity, current community levels, the patient's pre-existing risk of infection, etc that there is a high risk of infection, then P2/N95 respirators should be used in preference to surgical masks.

Healthcare worker infection

In August 2020, the RACP raised concerns regarding the rate of COVID-19 infections in healthcare workers acquired in the workplace and raised that urgent action must be taken to protect frontline workers. The RACP called on governments to:

Commit to a target of zero occupationally-acquired healthcare worker COVID-19 infections.

“All Governments have a responsibility to provide a safe working environment for healthcare workers, and to commit to a target of zero occupationally acquired infections.”

Report nationally and by jurisdiction on healthcare workers testing positive to COVID-19 by age group, occupation, primary workplace and if the infection was occupationally acquired. In September 2020, the RACP welcomed the establishment of a new partnership between the Infection Control Expert Group (ICEG) and the national COVID-19 evidence taskforce.

The RACP outlined that the partnership is “*critical in ensuring a safer environment for physicians, surgeons, their trainees and other health workers. The partnership will bring together leading experts in infectious diseases and infection control and a range of other specialists to review the high volume of emerging evidence and develop key recommendations for clinical settings. [...] Our colleges will continue to work closely with the Commonwealth and states to ensure additional measures for tracking workplace acquired infections with a commitment to ensure the safety of health and aged care workers, patients and residents are implemented.*”

In 2020, the RACP’s Australasian Faculty of Occupational and Environmental Medicine (AFOEM) released several COVID-19 guidance documents on Workplace Risk Management, Guidance for pregnant healthcare workers and Guidance for occupational physicians providing advice on COVID-19.

Healthcare worker vaccination

The RACP supports efforts to maximise the uptake of immunisation across the community for all vaccine preventable diseases, including COVID-19. Immunisation provides effective means to reduce the impact of COVID-19 on individuals and the community. The vaccines available in Australia have an excellent safety profile and are extremely effective in preventing severe disease, hospitalisation and death.

Making immunisation a condition of employment for health and aged care workers is an appropriate response to the COVID-19 pandemic, as it aligns with advice from the clinical advisory bodies in Australia and Aotearoa New Zealand and is supported by the RACP.

Respectful discussions between employers, employee groups and individual employees will allow for the voicing of concerns and resolution of uncertainties as we all move forward together to mitigate the risk of the virus that causes COVID-19.

(Statement developed by COVID ERG and College approved 17 December 2021)

Healthcare worker wellbeing

In March 2022, the RACP hosted two webinars with experts focussing on the health and wellbeing of physicians. The first webinar *Psychosocial disruptions of COVID-19 and mental health needs of healthcare workers* aimed to provide attendees with an increased understanding and awareness of the psychosocial disruptions of COVID-19 and mental health needs of healthcare workers. The second webinar *Supporting physician health and wellbeing* informed participants of initiatives available to support physician health and wellbeing as well as information on available resources. Experts in the areas of clinical psychology, mental health, staff wellbeing, trainee mentoring and leadership provided presentations at these webinars.

Survey	
10/08/2020	RACP survey: 20 per cent of physicians in public hospitals sourcing their own PPE – calls for greater transparency on government stockpile The RACP released a survey of its members, revealing a significant proportion of its members in public hospitals are resorting to buying their own protective equipment, with almost half having limited or no access to N95 grade masks and 11% with no access

Healthcare worker infection	
Advocacy	
16/09/2020	Medical colleges welcome new health worker protection measures RACP and the Royal Australasian College of Surgeons (RACS) has welcomed additional measures from the Commonwealth designed to improve the safety of healthcare workers
25/08/2020	RACP says healthcare worker infection numbers in Victoria are extremely concerning RACP says that data released that 86% of investigated COVID-19 infections in healthcare workers have been acquired in the workplace is extremely concerning and urgent action must be taken to protect frontline workers, particularly if healthcare workers are the largest cohort of those newly infected with COVID-19
Consultation/Endorsement	
October 2020	Support for the COVID-19 in Health Care and Support Workers in Aotearoa New Zealand

Healthcare worker wellbeing	
Shared learning	
24/03/2022	Webinar Supporting physician health and wellbeing. The webinar aims to provide an increased understanding and awareness of the psychosocial disruptions of COVID-19 and mental health needs of healthcare workers.

17/03/2022	Webinar Psychosocial disruptions of COVID-19 and mental health needs of healthcare workers. The webinar aims to provide details of initiatives available to support physician health and wellbeing as well as information on available resources.
Survey	
25/11/2021	Results of RACP member survey: “Are you COVID-19 safe?” – a full report In September and October 2021, the College conducted a survey of members in Australia on the impact of COVID-19 and the Delta variant on physicians and their work. The results of the survey provide direct insight into physicians’ access to vaccinations, views on booster shots for health care workers, the provision of and access to Personal Protective Equipment (PPE), and the impact of COVID-19 and the Delta variant on their work and well-being.

2. Clinical care

Telehealth

The RACP has advocated for the permanent retention of specialist telehealth items in the Medicare Benefits Schedule (MBS) since they were first introduced in March 2020 by the Australian Government in response to the COVID-19 pandemic.

“We have long campaigned for the removal of telehealth distance requirements to make it easier for patients - many who find it difficult to attend face to face appointments. Telehealth expansion is important because it allows doctors to continue providing specialist care, while eliminating any unnecessary face-to-face contact during the COVID-19 pandemic. It will also be important to ensure that those patients who do need a face to face consultation are able to do so.”

In April 2020 the RACP, in partnership with The Australian Digital Health Agency, hosted a webinar to provide members with up to date and best practise information on Telehealth and Electronic Prescribing.

The rapid expansion of telehealth has been extremely important in enabling the continuation of many health services during the COVID-19 pandemic. The RACP undertook a survey of members on the roll out of telehealth services and responses showed that telehealth has the potential to permanently improve accessibility and equity in accessing health services, if maintained.

In September 2020, the RACP welcomed the Australian Government decision to extend telehealth services until March 2021.

“Telehealth has proven to be a critical tool that will be necessary not just for the pandemic but beyond. The RACP has strongly advocated for specialist telehealth access to be continued, and we are pleased that our constructive discussions with the Government have resulted in this outcome. We’re always looking for ways to reduce barriers for people to receive healthcare – and telehealth has been a gamechanger in this respect. We can expect it to have broad ranging benefits that we haven’t yet seen reach full potential, for patients, practitioners, hospitals and government. Telehealth has the potential to permanently improve the system, leading to better outcomes for patients and easing the burden on future budgets as people get the help they need earlier and more efficiently. It’s clear that we’ve unlocked a really powerful way of providing flexible healthcare during this pandemic – and it’s something that the community should continue to benefit from once the threat of the virus has passed. Telehealth has been particularly helpful for patients who find it a challenge to attend appointments in person such as those with mobility issues, immune-suppressed patients, those living in rural and remote areas and Indigenous patients who feel more culturally safe attending appointments in their own environment. What’s clear from the success of telehealth is that there’s no going back to how things were done in the past.”

In October 2020, an RACP Town Hall meeting was organised with the Minister for Health and Aged Care, The Hon. Greg Hunt MP, to provide an opportunity for Fellows to discuss the use of telehealth and how remote consultations may progress in the future directly with the Minister.

In 2021, the RACP provided feedback to the Department of Health's consultation on the future of the specialist telehealth items. Options for reform were formulated by the Department subject to the constraint that the specialist telehealth items, if they were to be retained permanently in the MBS, should be cost neutral to the Commonwealth. The Department decided to retain all existing specialist telehealth items until the end of 2021. This constituted a major success for the RACP and members.

Our advocacy led to the Government's December 2021 announcement that telehealth arrangements were being made permanent. While the RACP welcomed the introduction of the permanent items, we have been raising member concerns in relation to some aspects of the arrangements in our submissions to and meetings with the Department of Health and in our December 2021 [media release](#). The chief concerns remain the removal of specialist telehealth phone items and imposing the 30-20 auditing rule.

Our strong and consistent advocacy efforts resulted in two wins early in 2022:

- The Government [has reinstated](#) 33 initial and complex specialist telephone consultation items and 40 specialist inpatient telehealth items until 30 June 2022. A RACP [media release](#) welcomed this decision.
- The introduction of the 30-20 auditing rule is being delayed and reviewed for impact on access to specialist care. A January 2022 [media release](#) reiterated our advocacy against [this](#) threshold.

Since the announcement of the permanent telehealth arrangements in late 2021, several members have expressed their concerns about these, as did a number of the affiliated speciality societies. A key theme of the feedback stresses that telephone consultations facilitate care provision and continuation in a variety of settings, for many priority population and underserved patients, and during lockdowns. Their removal post June 2022 would have a negative impact on access to care, especially for those patients who have difficulty in using and accessing videoconferencing technology.

The College has responded to member and society inquiries individually and disseminated information about the new arrangements and our activities through appropriate College channels, such as [President and DFAC bulletins](#), website [news](#) items and tiles, the RACP Online Community (ROC) and social media. The College continues to highlight the implications of removing specialist telehealth phone items after June 2022 to the Minister, the Department, law and policy makers and other stakeholders.

The RACP [Pre-Budget submission 2022-2023](#) contains several telehealth and MBS related recommendations. These propose to increase patient access to physician care by:

- Reinstating MBS items for telehealth consultations by phone on a permanent basis.
- Funding videoconferencing technology packages to enhance the take up for priority populations to promote equitable access to telehealth including in rural and regional areas,

aged care settings and for patients for whom access to face to face consultation is limited by the presence of disability (including developmental and intellectual).

- Providing a Practice Incentive Payment covering all consultant physicians to promote telehealth models of care and the delivery of integrated multidisciplinary care in conjunction with the patient's GP.
- Introducing specialist health items to the MBS to facilitate secondary consultations with general practitioners, other types of specialists where one of the health providers is the primary specialist who requires assistance from another specialty and allied health providers, with or without the patient present.

RACP [media release](#) announcing the release of the Pre-Budget statement was launched in March 2022; it argues that this year's budget must include specialist telehealth items by phone as a permanent feature of the healthcare system. Similar messaging continues to be communicated in Pre-Budget and Pre-Election meetings with members of parliament, departmental officials and other stakeholders.

Clinical evidence taskforce

The National COVID-19 Clinical Evidence Taskforce launched the '[living guidelines](#)' at the start of the COVID-19 pandemic to provide the latest, evidence-based recommendations to clinicians caring for patients with COVID-19. The RACP is a member of the Taskforce and sit on the National Steering Committee. As such the RACP provides feedback on these 'living guidelines' to ensure consistency in the clinical management of COVID-19 across healthcare settings.

Recommendations have been developed for:

- Definition of disease severity
- Monitoring and markers of clinical deterioration
- Drug treatments
- Chemoprophylaxis
- Respiratory support in adults
- Respiratory support in neonates, children and adolescents
- Venous thromboembolism (VTE) prophylaxis
- Therapies for existing indications in patients with COVID-19 UPDATED
- Post-COVID-19
- Timing of surgery following COVID-19 infection
- Pregnancy and perinatal care
- Child and adolescent care

Post-acute Sequelae of COVID-19

The RACP has taken a leadership role in the care of patients with Post-Acute Sequelae of Covid-19 (PASC) or Long COVID, and in particular the role of rehabilitation physicians in assisting a person with Long COVID to return to their previous level of function or to learn to function with a new disability.

In September 2021, the RACP hosted two webinars with experts regarding Long COVID. The first webinar *Understanding and managing long COVID* aimed to help participants understand the impact of Long COVID and how to manage matters in the early phase, including an understanding of how to investigate and diagnose Long COVID, and how to manage patients in the sub-acute phase of their disease. The second webinar *Living and working with Long COVID* allowed participants to further understand the pathophysiology of long COVID, and how to manage the longer-term practicalities of living and working with the consequences of this disease. Experts in the areas of epidemiology, rehabilitation, occupational health and a person with lived experience of Long COVID provided presentations at these webinars.

28/01/2022	<p>The RACP Pre-Budget Submission 2022-2023 includes a number of telehealth related recommendations. It argues that telehealth has improved access to specialist care for patients and that these improvements must be retained, including by reinstating MBS items for telehealth consultations by phone on a permanent basis.</p>
17/01/2022	<p>Physicians welcome decision to reinstate telehealth items for specialist care</p> <p>The RACP has welcomed the decision by the Federal Government to reinstate a range of telehealth items so that patients across Australia can regain access to specialist care via phone.</p>
06/01/2022	<p>RACP welcomes review of phone consultation audits for specialists but remains concerned about reduction of phone consultations</p>

	The RACP welcomes the Australian Government's decision to review recently announced telehealth arrangements to ensure patient access to specialist care.
17/12/2021	RACP welcomes permanent telehealth MBS arrangements, but concerned about changes that might hurt vulnerable patients The RACP thanks Minister Hunt for making telehealth arrangements permanent and asks to work the Department on making these as equitable as possible
15/12/2021	The RACP President met with Department of Health officials to discuss proposed arrangements for permanent telehealth items.
14/7/2021	The RACP President met with the Hon Greg Hunt MP Minister for Health to discuss a range of healthcare issues in particular telehealth COVID-10 preparedness.
12/6/2020	Survey of specialists shows telehealth can improve access and equity permanently RACP has surveyed its members on the roll out of telehealth services, with the results showing telehealth has the potential to permanently improve accessibility and equity in accessing health services, if maintained
29/03/2020	Significant expansion of telehealth items announced Following extensive advocacy by the College, the Commonwealth has announced whole of population telehealth for patients, general practice, primary care and other medical services to support the response to COVID-19. Please note that additional items are expected to become available. We will work with relevant specialty bodies and the government this week to identify additional items that can be provided by telehealth.
29/03/2020	RACP supports expansion of telehealth RACP supports today's announcement by the Federal Government to expand access to telehealth
27/03/2020	MBS telehealth update From 13 March 2020 to 30 September 2020 (inclusive), new MBS telehealth items are available for services provided to vulnerable people within the community, or who are in isolation due to COVID-19, and services provided by healthcare providers (including specialist and consultant physicians) who are in isolation due to COVID-19, or who are also vulnerable to COVID-19
23/3/2020	Physicians welcome expansion of telehealth RACP welcomes the Federal Government's announcement today to expand access to telehealth to cover services provided by vulnerable physicians
20/03/2020	Physicians call for Telehealth to be expanded for all consultations RACP is calling on the Federal Government to urgently remove all restrictions on telehealth to allow physicians to continue to safely treat all patients during COVID19 outbreak

11/03/2020	Physicians welcome Government health response package COVID-19 RACP has welcomed the Federal Government's \$2.4 billion health response package to manage the impacts of COVID 19 in our population and on our health system
Consultation/endorsement	
27/10/2021	<i>MBS Specialist Telehealth – Post Pandemic</i> The DoH sought the RACP's views on a set of options for permanent telehealth items, with the RACP providing our feedback after conducting a consultation.
8/12/2020	<i>MBS Specialist Telehealth – Post Pandemic</i> The DoH sought the RACP's views for achieving sustainable telehealth reform. The RACP provided a number of submissions.
10/11/2020	<i>National and Victorian July-September MBS Item Data</i> Response to D0H's request to provide RACP views on specialist telehealth.
October 2020	<i>MBS Specialist Telehealth – Post Pandemic</i> Feedback provided to DoH. The feedback was on very specific proposals for reform to the telehealth items and would be of most relevance to those who undertake private billings
June 2020	<i>RACP May survey on COVID-19 Telehealth MBS items report</i> Report to the Department of Health and other stakeholders–regarding member experience of COVID-19 MBS telehealth items
7/05/2020	<i>Letter to Hon Scott Morrison MP Prime Minister - Medicare Telehealth items introduced for COVID-19</i> Commend government for the rapid introduction of the new MBS telehealth and telephone equivalent items for a range of specialist and consultant physician attendances
Survey	
June 2020	Results of RACP Members' Survey of new MBS Telehealth attendance items introduced for COVID-19 On 18 May 2020, RACP distributed a voluntary survey to all its practising Australian based members on their use of the new MBS telehealth attendance items introduced for COVID-19. Members had until close of business 25 May 2020 to complete the survey. There were 950 responses to this survey and the average completion rate was 77%
Shared Learning	
29/04/2022	The President appeared on a panel titled <i>COVID 19: Lessons Learned from the Global Internal Medicine Community</i> at the <i>Internal Medicine Meeting 2022: Mastering Medicine Together</i> hosted by the American College of Physicians between April 28-30. The panel included representation from Mexico, Latin America, the UK, and South Africa. The panel included roundtable discussion involving about Internal Medicine leaders from around the

	world, providing a unique opportunity to share experiences and initiatives.

24/04/2020	<p>Improving support for patients receiving treatment for opioid dependence during COVID-19 outbreak</p> <p>RACP warns that without the right support, some Australians being treated for opioid dependence face the risk of relapsing into addiction, and related health and social problems, including overdoses, during the COVID-19 pandemic</p>
21/04/2020	<p>Interim guidance for the delivery of medication assisted treatment of opioid dependence in response to COVID-19: a national response</p> <p>Authors: Prof Nicholas Lintzeris FACHAM, Dr Vicki Hayes FAFPHM FACHAM, Dr Shalini Arunogiri FRANZCP Endorsed by: RACP, RACGP, AVIL, RANZCP, APSAD, Pharmaceutical Society of Australia, Penington Institute</p> <p>This document aims to provide guidance to clinicians in how to adapt treatment during this major transition. It should be read alongside state and territory guidance issued in response to COVID-19, recognising that many jurisdictions are at different stages of response, and also that many of the communications from government authorities relate to regulatory or guideline changes, rather than focussing on aspects of clinical care</p>

3. Public health

COVID-19 vaccination

The RACP has been very active in supporting the roll-out of the COVID-19 vaccines. In October 2020, the College wrote to the Minister for Health and Aged Care, The Hon. Greg Hunt MP, requesting that the Australian Government consider a number of actions that would facilitate the rollout of COVID-19 vaccines, including:

- Improve the Australian Immunisation Register (AIR) and other systems that support the distribution, supply and tracking of vaccines, including linking to other health datasets.
- Expand the AusVaxSafety surveillance system to facilitate linkage with other health datasets to support post-market vaccine safety.
- Develop and implement a vaccine injury compensation scheme.
- Partner with social scientists, developing communications and messaging to engage early with priority communities thereby encouraging vaccine uptake.
- Develop a publicly available vaccine delivery plan that ensures vaccine(s) will be equitably delivered.

The RACP also called on the Australian Government to develop a more effective communications campaign to support the roll-out.

Schools

The RACP remains concerned about the impacts of school closures and lockdowns on children and young people. Closing schools and early childhood education services has a significant effect on the mental health, wellbeing and learning of children and young people. These impacts are greatest for children and young people from disadvantaged backgrounds, and for those with disabilities.

During 2021, the RACP has advocated for school closures to only be used as a last resort in containing COVID-19 outbreaks, and only occur on a case-by-case basis, such as when a case or contact is detected within a school setting.

“We must avoid blanket closures of schools because of the detrimental impact these have on the social and psychological wellbeing of students. School is not only a place for academic learning but also for connecting with friends and emotional support from teachers and staff. School closures may lead to social isolation and loneliness and have negative impacts on the mental health of children and young people. School closures also place additional economic and psychological stress on families which can increase the risk of family conflict and violence. They also place unintended strain on the health care system as health care staff need to attend to childcare and home schooling. A range of measures can be undertaken to

manage the health risks associated with schools remaining open such as avoiding large gatherings, minimising adult mixing on the school campus, mask use, and staggering the start and end of the school day. Clear protocols for schools on hygiene measures, use of protective equipment, cleaning and physical distancing remain essential.”

To minimise the risk to teachers, in July 2021, the RACP urged State/Territory and Federal governments to urgently prioritise the vaccination of school staff.

“There is little evidence to show that schools are a high-risk transmission environment for children. But there is a risk there for teachers, which is why we’re calling for all staff in school settings to be given priority access to the vaccine, so they can extend their own safety into their workplace. Having vaccinated educational staff will assist in quelling the anxiety around risk and increase the inclination towards letting schools remain open during snap lockdowns.”

In August 2021, the RACP called on the National Cabinet to establish a plan to prioritise face-to-face learning for school-aged children and adolescents in the context of the Delta variant – which included priority vaccines for all school staff. The RACP supports the development of national guidelines to provide State and Territory governments with a best-practice approach to mitigate the risk of COVID-19 transmission in schools.

“Whilst they are necessary right now in some high-risk locations in Victoria and NSW, the impacts of school closures do come at a great cost to children’s development and their mental and physical wellbeing. We’re seeing rising mental health issues in children which is deeply concerning. The impact of school closures is also far greater for children from lower socio-economic backgrounds, children living with disabilities, and in families where children are exposed to domestic violence. We need a nationally consistent approach to keep children and teachers safe, whilst also minimising school closures.”

“We’re calling on the National Cabinet to make getting children back to school, and keeping them there, a priority, and provide some guidelines on the path forward.”

Key measures outlined in the call included: mandating masks for certain age groups, ventilation of classrooms including HEPA filters, staggered school starts, and physical distancing where possible. Other public health measures such as handwashing and test/trace/isolate also remain important.

25/02/2022	The President-Elect met with the NSW Chief Paediatrician, Dr Matthew O'Meara, to discuss the RACP Kids COVID Catch Up campaign
23/02/2022	The President-Elect met with Federal Member for Macarthur and RACP member, Dr Mike Freelander, to discuss the a number of items including the RACP Kids COVID Catch Up campaign.
28/01/2022	Paediatrician available to comment on schools returning The RACP Paediatrician and President-Elect of the College, Dr Jacqueline Small, is available to comment ahead of schools returning on Monday and Tuesday.
24/01/2022	RACP welcomes NSW and VIC government plans to keep kids at school The RACP welcomes the back-to-school plans announced for New South Wales and Victoria. The RACP is however calling for a longer-term plan beyond the first four weeks of Term 1. The RACP also hopes all jurisdictions will soon follow their lead so that there is a consistent national approach.
13/01/2022	Paediatricians call for a national plan to keep schools open The RACP reaffirms the importance of keeping schools open for face-to-face learning across Australia, echoing its statement in the midst of the 2021 Delta outbreak that school closures should only be used as a last resort.
27/08/2021	Paediatricians support vaccinations for young people: "Protecting children from COVID-19 is the best thing to do" RACP has recommended that all children aged 12-15 years receive the Pfizer COVID-19 vaccination when available, in line with recent ATAGI advice
25/08/2021	RACP calls for COVID-19 national return-to-school guidelines RACP is calling on the National Cabinet to establish a plan to prioritise face-to-face learning for school-aged children and adolescents in the context of the Delta variant – which includes priority vaccines for all school staff
01/07/21	RACP warns against blanket school closures, and says Governments should not 'extend' school holidays to manage outbreak RACP says school closures should only be used as a last resort in containing COVID-19 outbreaks, and only occur on a case-by-case basis such as when a case or contact is detected within a school setting. We commend the WA government for keeping schools open despite a snap lockdown this week.
Consultation/endorsement	
8 June 2021	<i>Department of Health weekly meeting</i> - RACP raised concerns regarding closing schools in response to COVID outbreaks and calling for teachers and school staff to received COVID vaccinations as a priority.

	<i>NOTE: The DoH advises school closures should be advocated for through the jurisdictions and for changes to the vaccinations for teachers through the AHPPC</i>
--	---

4. Priority populations

Disability

As the roll-out of COVID-19 vaccines progressed, the RACP advocacy focused on the roll-out of COVID-19 vaccines to people with disability, particularly the number and proportion of people with disability and disability support workers who had been vaccinated. The slow roll-out was particularly concerning considering the extra vulnerabilities that people with disability experience. The RACP has called on the Government to:

- Take urgent action to expedite and streamline the roll-out of the COVID-19 vaccine to the disability sector.

“People with disability may be at increased risk of developing severe illness due to COVID-19, especially if they also have other conditions including diabetes, cancer, heart disease, or obesity. Disability care settings should not be considered to be lower risk than aged care settings.”

- Provide more transparency in the Australian Government’s current method of publishing data on vaccination in the disability sector.

“Physicians are calling for more transparency in the government’s current method of publishing data on vaccination in the disability sector and the ways they are planning to resolve this issue. The government’s daily vaccination updates do not provide comprehensive data about the progress of vaccination of people with disabilities. This may be masking the very low numbers of vaccinations that have been delivered in disability care settings.”

- Ensure that COVID-19 vaccination information is accessible.

“It’s imperative to ensure that vaccination information is accessible so that people with disability, their families, and their carers can disseminate that information and make appropriate decisions to get their vaccine at the earliest possible opportunity.”

Māori and Pasifika

In 2020, the RACP raised concerns that the COVID-19 pandemic may exacerbate existing inequities in Aotearoa New Zealand and that the campaign to #MakeHealthEquityTheNorm was important in this space.

“With people staying indoors and at home for now, the pandemic exit strategy needs to keep health equity – particularly in housing, work and wellbeing – as the central guiding principle. [...] This has to be an opportunity to do better for our most vulnerable whānau, so that everyone can thrive. We don’t want to see existing inequities deepened by this pandemic. [...] Existing inequities are at risk of being exacerbated. The Pharmacy Guild has estimated that around 20 per cent fewer prescriptions are being dispensed – that is likely to include people

who are delaying accessing essential health care, due to fears they will contract the virus or barriers to access. Around 30 per cent of households could not pay an unexpected bill of \$500 or more without borrowing. Whānau are living pay cheque to pay cheque already – COVID-19 will see work dry up overnight across entire workforces. The strain of this sort of direct hit on a household's income is potentially devastating. Our College wants the norm in Aotearoa NZ to be one where homes are warm and dry, the minimum wage is the Living Wage and all people enjoy good health and wellbeing.”

In Aotearoa New Zealand in August 2021, the RACP strongly supported the call of Te Rōpū Whakakaupapa Urutā for Māori and Pasifika to be prioritised for the first dose of the vaccine. The RACP outlines support for the approach recommended by Urutā, where kaumatua and kuia, hapū māmā and people living with long term conditions would be vaccinated with urgency, before working to roll out the first dose to Māori and Pasifika aged 12 and up.

“Māori and Pasifika have the greatest risks across Covid-19 risk factors, hospitalisation and mortality rates, because these communities experience profound health inequities. [...] The vaccine rollout has to engage with Māori and Pasifika health and community leadership – they will have the solutions to optimise vaccination coverage.”

Children and young people

The RACP recommended that all children aged 12-15 years receive the Pfizer COVID-19 vaccination when available, in line with recent ATAGI advice (27 August 2021). RACP President Professor John Wilson said that *‘parents can be confident that the safety and effectiveness of the vaccines has been carefully evaluated through international clinical trials and analysis of real-world data.’*

Aged Care

Key issues include:

- Safety and healthcare in Residential Aged Care Facilities (RACFs)
- Hospital and community care

Noting that: older people are not homogeneous; aged care does not operate as a unified system; aged care relies on a qualified and maintained workforce, and the benefits to older people of telehealth and other non-contact technology.

Vaccines/vaccinations	
Advocacy	
14/10/2021	President Professor John Wilson, Paediatrics and Child Health Division President Professor Catherine Choong and

	Dr Asha Bowen, RACP COVID-19 Expert Reference Group representative, met with the Australia Medical Association (AMA) President Dr Omar Korshid to discuss the impacts of the pandemic on children and policy on COVID-19 vaccination of children and adolescents.
20/08/2021	Reset for equity: First dose of COVID-19 vaccines for Māori and Pasifika The Royal Australasian College of Physicians (RACP) tautoko the call of Te Rōpū Whakakaupapa Urutā for Māori and Pasifika to be prioritised immediately for a first dose of the vaccine
17/08/2021	Physicians reassure parents: "COVID-19 vaccination of children is important to protect them from the virus" RACP has recommended that high-risk children aged 12-15 years receive Pfizer COVID-19 vaccination in line with recent ATAGI advice
11/06/2021	Dr Jacqueline Small, President-elect, met with Chris Faulkner PSM, Assistant Secretary COVID-19 Vaccine Task Force – Disability, to raise concerns about the slow rollout of COVID-19 vaccines, particularly the low numbers and proportion of people with disability and disability support workers who have been vaccinated
17/05/2021	RACP encourages the Australian Government to release further information on the vaccine rollout to people with disability and disability support workers RACP is concerned about the slow rollout of vaccines to people with disability and is calling for greater reporting from the Australian Government
Consultation/endorsement	
15/07/2021	<i>Letter to Prof Brendan Murphy Secretary, Department of Health - The COVID-19 vaccine rollout and its implications for the disability sector and schools</i> The RACP urges you to take urgent action to expedite and streamline the rollout of the COVID-19 vaccine to the disability sector and schools. We believe that our recommendations would have the benefits of: <ul style="list-style-type: none"> • Significantly mitigating the risks of COVID-19 infection to an extremely at-risk segment of the population (people with disability, their carers and disability support workers). • Supporting the mental health, wellbeing and learning of children and young people by enabling schools to remain open even during outbreak periods requiring 'lockdown' restrictions (as has now occurred in Western Australia).

Aged Care	
Advocacy	
July 2020	College submission to the Royal Commission into Aged Care Quality and Safety: impact of COVID-19 on aged care services

	<p>The Royal Commission into Aged Care Quality and Safety has provided an important opportunity for the Royal Australasian College of Physicians to share what we know of the impact of the coronavirus (COVID-19) on the aged care sector.</p> <p>This submission describes the frontline experience of physicians, who are trained in complex care, throughout the COVID-19 pandemic. This experience addresses firstly, serious concerns about Residential Aged Care Facilities (RACFs) and secondly, experience relating to hospital and community care. Our messages are intended to raise the overall level of safety and care to reinforce equity</p>
--	--

5. Equity and Health System Capacity

Equity

The global COVID-19 pandemic has highlighted health and social inequities experienced by 'vulnerable and marginalised' populations worldwide, particularly low socio-economic communities and those living below the poverty line. In some instances, the pandemic has exacerbated already well-documented health inequities, such as those relating to race and ethnicity, socio-economic status, homelessness, disability and ageing. In other instances, it has created new and unforeseen inequities, particularly with respect to education and employment.

Throughout the COVID-19 pandemic, the RACP has advocated for a greater emphasis on equity in the ongoing response and recovery from the impacts of COVID-19.

Health System Capacity

The RACP has ongoing concerns regarding health system capacity during the COVID-19 pandemic and for recovery. There is a need to optimise preventive strategies and acute care capacity directly related to the care of individuals with COVID-19 related illnesses, and to address pandemic-related impacts on cancer screening and other preventive programs; as well as maintaining and strengthening other acute care services, mental health, and child and adolescent welfare.

The RACP has advocated for services and programs to be maintained across all States and Territories (and at a national level where relevant) and across public and private practice, including metropolitan, regional, rural, and remote areas with appropriate liaison with First Nations leaders and communities, as well as multicultural leaders and communities.
