Physician Readiness for Expert Practice (PREP) Training Program

Nephrology Advanced Training Curriculum

TO BE USED IN CONJUNCTION WITH:

Basic Training Curriculum – Adult Internal Medicine
Basic Training Curriculum – Paediatrics & Child Health
Professional Qualities Curriculum

ACKNOWLEDGEMENTS

Fellows, Trainees and RACP staff have contributed to the development of this curriculum document.

The College specifically thanks those Fellows and Trainees who have generously contributed to the development of these curriculum documents, through critical comments drawn from their knowledge and experience and the donation of their time and professional expertise.

The following Fellows and Trainees, in particular, deserve specific mention for their contribution:

- Prof Mark Brown, FRACP
- Dr Scott Campbell, FRACP
- Dr Philip Clayton, Advanced Trainee
- Dr Tony Elias, FRACP
- Dr Carmel Hawley, FRACP
- Dr Tonya Kara, FRACP
- Dr Troy Kay, FRACP
- A/Prof Robyn Langham, FRACP
- Dr Cathie Lane, FRACP
- Dr Paul Lawton, FRACP
- Dr Vicki Levidiotis, FRACP
- Dr Fiona Mackie, FRACP
- A/Prof George Mangos, FRACP
- Dr Steve McTaggart, FRACP
- Dr Richard Phoon, FRACP
- Dr Angus Ritchie, Advanced Trainee
- Dr Paul Snelling, FRACP
- Dr Nigel Toussaint, FRACP
- Dr Amanda Walker, FRACP
- Prof Rob Walker, FRACP

The RACP gratefully acknowledges the contribution of the Australian and New Zealand Society of Nephrology to the development of this curriculum.

The process was managed by the Curriculum Development Unit within the College's Education Deanery, who designed the document, drafted content material, organised and facilitated writing workshops, developed resource materials, and formatted the final document.

RACP FELLOWSHIP TRAINING PATHWAYS AND THE CONTINUUM OF LEARNING

^P Trainees must complete Basic Training in Paediatrics & Child Health to enter this program.

^A Trainees must complete Basic Training in Adult Medicine to enter this program.

¹ Trainees who have entered Advanced Training in Palliative Medicine via a RACP Basic Training Program will be awarded FRACP upon completion and may subsequently be awarded FACHPM. Trainees who have NOT entered Advanced Training in Palliative Medicine via a RACP Basic Training Program will only be awarded FACHPM upon completion.

² The Child & Adolescent Psychiatry Joint Training Program with the Royal Australian and New Zealand College of Psychiatrists (RANZCP) is currently under review by the RACP and RANZCP and closed to new entrants at present.

³ Alternative entry requirements exist for these training programs; please see the corresponding PREP Program Requirements Handbook for further information.

NB1: This diagram only depicts training programs that lead to Fellowship. Please see the RACP website for additional RACP training programs.

NB2: For further information on any of the above listed training programs, please see the corresponding PREP Program Requirements Handbook.

CURRICULUM OVERVIEW

The discipline of nephrology is defined by the care of patients with diseases of the kidneys and urinary tract. Nephrology is a specialty with a significant component of general medicine, basic science and clinical research, teaching, as well as clinical areas of transplantation, hypertension, obstetric medicine and more recently an opportunity for procedural work.

Nephrology – Advanced Training Curriculum

This curriculum outlines the broad concepts, related learning objectives and the associated theoretical knowledge, clinical skills, attitudes and behaviours required and commonly utilised by nephrology physicians within Australia and New Zealand.

The purpose of Advanced Training is for trainees to build on the cognitive and practical skills acquired during Basic Training. At the completion of the Nephrology Advanced Training Program, trainees should be competent to provide at consultant level, unsupervised comprehensive medical care in nephrology.

Attaining competency in all aspects of this curriculum is expected to take three years of training. It is expected that all teaching, learning and assessment associated with the Nephrology Curriculum will be undertaken within the context of the physician's everyday clinical practice and will accommodate discipline-specific contexts and practices as required. As such it will need to be implemented within the reality of current workplace and workforce issues and the needs of health service provision.

There may be learning objectives that overlap with or could easily relate to other domains; however, to avoid repetition, these have been assigned to only one area. In practice, however, it is anticipated that within the teaching/learning environment, the progression of each objective would be explored.

Note: The curricula should always be read in conjunction with the relevant College Training Handbook available on the College website.

Professional Qualities Curriculum

The Professional Qualities Curriculum (PQC) outlines the range of concepts and specific learning objectives required by, and utilised by, all physicians, regardless of their specialty or area of expertise. It spans both the Basic and Advanced Training Programs and is also utilised as a key component of the Continuing Professional Development (CPD) program.

Together with the various Basic and Advanced Training curricula, the PQC integrates and fully encompasses the diagnostic, clinical, and educative-based aspects of the physician's/paediatrician's daily practice.

Each of the concepts and objectives within the PQC will be taught, learnt and assessed within the context of everyday clinical practice. It is important, therefore, that they be aligned with, and fully integrated into, the learning objectives within this curriculum.

EXPECTED OUTCOMES AT THE COMPLETION OF TRAINING

Graduates from this training program will be equipped to function effectively within the current and emerging professional, medical and societal contexts. At the completion of the Advanced Training Program in Nephrology, as defined by this curriculum, it is expected that a new Fellow will have developed the clinical skills and have acquired the theoretical knowledge for competent nephrology practice. It is expected that a new Fellow will be able to:

- deliver health service provision independently and demonstrate a practical understanding of renal diseases/conditions, renal replacement therapies and transplantation
- recognise the impact of chronic kidney disease on individuals, family groups and society
- describe the particular needs of Aboriginal and Torres Strait Islander, Maori and Pacific Islander peoples of Australia and New Zealand
- show an awareness of, and sensitivity to, the special needs of patients from culturally and linguistically diverse backgrounds
- work within and fully utilise multidisciplinary team based approaches to the assessment, management and care of patients
- understand the importance of independent research and ongoing education and training
- be equipped with the skills required to develop independent research projects
- implement future career planning and decision making processes based on a more informed level of knowledge and understanding.

CURRICULUM THEMES AND LEARNING OBJECTIVES

Each of the curriculum documents has been developed using a common format, thereby ensuring a degree of consistency and approach across the spectrum of training.

Domains

The Domains are the broad fields which group common or related areas of learning.

Themes

The Themes identify and link more specific aspects of learning into logical or related groups.

Learning Objectives

The Learning Objectives outline the specific requirements of learning. They provide a focus for identifying and detailing the required knowledge, skills and attitudes. They also provide a context for specifying assessment standards and criteria as well as providing a context for identifying a range of teaching and learning strategies.

Colour coding in the learning objective tables

The various components within the learning objective tables have been shaded to differentiate between common, adult and paediatric specific material as follows:

DOMAIN 1	FOUNDATIONS OF NEPHROLOGY
Theme	Structure, Function, Epidemiology and Research
Learning Objective	Explain the anatomy of the kidneys and urinary tract
Knowledge	Skills
White: Common material	White: Common material
Grey: Adult specific material	Grey: Adult specific material
Green: Paediatric specific material	Green: Paediatric specific material

LEARNING OBJECTIVES TABLES

DOMAIN 1	FOUNDATIONS OF NEPHROLOGY
Theme 1.1	Structure and Function
Learning Objective	
1.1.1	Explain the anatomy of the kidneys and urinary tract
1.1.2	Describe the embryology of the kidneys and urinary tract
1.1.3	Explain the physiology of the kidneys and bladder
1.1.4	Describe the physiology of blood pressure and how the kidneys are involved in its regulation
1.1.5	Evaluate renal endocrine function
1.1.6	Explain the immune system and the role and actions of immunosuppressive agents
Theme 1.2	Growth and Development
Learning Objectives	
1.2.1	Explain the growth and development of the kidneys
1.2.2	Interpret somatic growth and renal disease
1.2.3	Recognise and evaluate developmental issues of children with renal disease
Theme 1.3	Diagnostic Methods
Learning Objectives	
1.3.1	Interpret a biopsy in renal medicine
1.3.2	Use and interpret imaging in renal medicine
1.3.3	Use and interpret pathology tests in renal medicine
Theme 1.4	Therapeutics
Learning Objectives	
1.4.1	Explain the principles of drug prescription in renal medicine
Theme 1.5	Epidemiology and Research
Learning Objectives	
1.5.1	Explain the epidemiology of renal disease
1.5.2	Discuss current science and research in nephrology

DOMAIN 2		DISEASES OF THE KIDNEYS AND URINARY TRACT	
Theme 2.1		Common Clinical Presentations	
Learning Objective			
2.1.1		Assess and manage proteinuria	
2.1.2		Assess and manage haematuria	
2.1.3		Assess and manage abnormal glomerular filtration rate	
2.1.4		Assess and manage chronic kidney disease	
2.1.5		Assess and manage nephrotic syndrome	
2.1.6		Investigate and manage renal emergencies	
2.1.7		Assess and manage patients with acute kidney injury	
Theme 2.2		Conditions Affecting the Kidneys	
Learning Objectives			
2.2.1		Assess and manage diabetic kidney disease	
2.2.2		Assess and manage glomerulonephritis	
2.2.3		Assess and manage hereditary and congenital renal diseases	
2.2.4		Assess and manage cystic kidney diseases	
2.2.5		Describe toxic renal diseases	
2.2.6		Assess and manage tubular disorders	
2.2.7		Assess and manage haemolytic-uraemic syndrome/thrombotic thrombocytopenic purpura, haematologic and rare diseases	
2.2.8		Assess and manage kidney stone disease	
2.2.9		Recognise and manage autoimmune diseases	
2.2.10		Assess and manage disorders of water balance and metabolism	
2.2.11		Investigate and manage hypertension	
2.2.12		Investigate tumours of the kidneys, ureters, bladder and prostate	
2.2.13		Assess and manage urinary tract infection	
2.2.14		Assess and manage renovascular disease	

Theme 2.3	End Stage Kidney Disease
Learning Objectives	
2.3.1	Plan and manage end stage kidney disease
2.3.2	Assess and manage accelerated and premature vascular disease
2.3.3	Insert a temporary venous catheter for dialysis
2.3.4	Describe dialysis in those with limited life expectancy
2.3.5	Explain renal replacement therapies
2.3.6	Plan and manage peritoneal dialysis
2.3.7	Plan and manage haemodialysis
2.3.8	Plan and manage the non-dialysis pathway
2.3.9	Describe haemofiltration and continuous renal replacement therapies
2.3.10	Plan and manage home haemodialysis therapies

DOMAIN 3	TRANSPLANTATION
Theme 3.1	Kidney Transplants
Learning Objectives	
3.1.1	Assess potential transplant recipients
3.1.2	Assess potential live transplant donors
3.1.3	Prescribe immunosuppressants and recognise complications
3.1.4	Acute transplant management
3.1.5	Manage the long term care of a transplant recipient

DOMAIN 1		FOUNDATIONS OF NEPHROLOGY	
Theme 1.1		Structure and Function	
Learning Objective 1.1.1		Explain the anatomy of the kidneys and urinary tract	
Knowledge		Skills	
<ul style="list-style-type: none"> explain the anatomy of the urinary system, including the bladder and prostate recognise the normal size and position of the kidneys, vessels, ureters and bladder identify the anatomy of the nephron at an ultrastructural level. 		<ul style="list-style-type: none"> assess the common variants of renal vasculature and renal structure localise the lower pole of a kidney for a renal biopsy using ultrasound interpret the normal appearance and common pathological features of kidneys shown by imaging modalities, including: <ul style="list-style-type: none"> ultrasound computed tomography (CT) plain radiography magnetic resonance imaging nuclear medicine scanning describe the strengths and shortcoming of the various imaging modalities interpret renal histopathology. 	

DOMAIN 1		FOUNDATIONS OF NEPHROLOGY	
Theme 1.1		Structure and Function	
Learning Objective 1.1.2		Describe the embryology of the kidneys and urinary tract	
Knowledge		Skills	
<ul style="list-style-type: none"> explain the embryology of the urinary tract and system recognise the relationship between abnormal embryology and clinical syndromes 			
<ul style="list-style-type: none"> describe the embryological, histological, clinical and radiological features of renal dysplasia and developmental abnormalities of the kidney including: <ul style="list-style-type: none"> congenital abnormalities of kidney and urinary system (CAKUT) renal dysplasia obstructive uropathy multicystic dysplastic kidneys (MCDK). 		<ul style="list-style-type: none"> assess developmental abnormalities on antenatal imaging and provide counselling interpret renal dysplasia on ultrasound and renal biopsy. 	

DOMAIN 1		FOUNDATIONS OF NEPHROLOGY	
Theme 1.1		Structure and Function	
Learning Objective 1.1.3		Explain the physiology of the kidneys and bladder	
Knowledge		Skills	
<ul style="list-style-type: none"> describe renal physiology, including: <ul style="list-style-type: none"> glomerular filtration rate (GFR) including its regulation and measurement tubulointerstitial function regulation of acid base balance, fluid handling, electrolyte balance discuss the strengths and limitations of current techniques used to measure renal parameters e.g. GFR by inulin clearance 		<ul style="list-style-type: none"> organise appropriate tests to measure renal function interpret results of blood analyses including acid base, electrolytes, and hormone measurements interpret the results of a urine dipstick test, and relate back to physiology and pathophysiology assess patterns of abnormalities in the above tests, including glomerulonephritis, tubulointerstitial disease and renal failure 	
<ul style="list-style-type: none"> describe the physiology of the developing nephron identify postnatal changes in renal tubular function and GFR explain the implications of interpreting GFR measurement techniques, including: <ul style="list-style-type: none"> ethylenediaminetetraacetic acid (EDTA) diethylene triamine pentaacetic acid (DTPA) mercapto acetyl tri glycine scan (MAG-3) cystatin C. 		<ul style="list-style-type: none"> interpret estimated glomerular filtration rate (eGFR) and its limitations discuss mechanism of action of commonly prescribed renal drugs on nephron function e.g. diuretics. 	

DOMAIN 1	FOUNDATIONS OF NEPHROLOGY
Theme 1.1	Structure and Function
Learning Objective 1.1.4	Describe the physiology of blood pressure and how the kidneys are involved in its regulation
Links	Learning Objective 2.2.11
Knowledge	Skills
<ul style="list-style-type: none"> describe the kidneys' contribution to blood pressure (BP) regulation, including: <ul style="list-style-type: none"> volume homeostasis pressure natriuresis tubuloglomerular feedback (TGF) renin angiotensin aldosterone system describe other main regulators of BP, including: <ul style="list-style-type: none"> sympathetic nervous system endothelial function adrenal glands. 	<ul style="list-style-type: none"> measure BP according to 'best practice' interpret the diurnal variations of BP regulation and how to adjust medications to optimise BP control interpret BP measurements in different age groups using reference data e.g. American College of Paediatrics for paediatric normal values discuss current methods of investigation described in the relevant regulatory systems interpret above tests.

DOMAIN 1	FOUNDATIONS OF NEPHROLOGY
Theme 1.1	Structure and Function
Learning Objective 1.1.5	Evaluate renal endocrine function
Knowledge	Skills
<ul style="list-style-type: none"> explain the main renal endocrine functions, including: <ul style="list-style-type: none"> renin, angiotensin, aldosterone axis vitamin D, calcium, phosphate and parathyroid hormone homeostasis (PTH) erythropoiesis explain how systemic hormones (ACTH, cortisol, noradrenaline/adrenaline, serotonin) may impact on renal endocrine function and BP control. 	<ul style="list-style-type: none"> evaluate renal endocrine systems in a clinicopathological context interpret results of investigations, including: <ul style="list-style-type: none"> aldosterone: renin ratio Ca/PO4/PTH/vitamin D levels measures of erythropoiesis evaluate the influence of systemic hormones on renal function and BP control.

DOMAIN 1	FOUNDATIONS OF NEPHROLOGY	
Theme 1.1	Structure and Function	
Learning Objective 1.1.6	Explain the immune system and the role and actions of immunosuppressive agents	
Knowledge	Skills	
<ul style="list-style-type: none"> describe normal immune function and how perturbations of the immune system may give rise to kidney specific or systemic disease that effect the kidneys describe the rationale/clinical trial outcome studies for the use of immunosuppressive treatments for these conditions discuss the rationale/clinical trial outcome studies using the various immunosuppressive regimens in renal transplant medicine compare the benefits and disadvantages of therapy including malignancy and infection; conventional and opportunistic explain how immunosuppressives can contribute to a desired therapeutic outcome and also to complications including infection and malignancy. 	<ul style="list-style-type: none"> prescribe immunosuppressive medication with an understanding of risks, side effects and expected outcomes assess aspects of immune function evaluate the potential risks of immunosuppressive therapy assess and manage the complications of immunosuppressive therapy, including appropriate referral to other specialist services. 	

DOMAIN 1	FOUNDATIONS OF NEPHROLOGY	
Theme 1.2	Growth and Development	
Learning Objective 1.2.1	Explain the growth and development of the kidneys	
Knowledge	Skills	
<ul style="list-style-type: none"> describe antenatal and postnatal assessment of kidney morphology and function, including physiological changes that occur during childhood. 	<ul style="list-style-type: none"> interpret renal growth patterns and their clinical implications, including hypoplasia. 	

DOMAIN 1	FOUNDATIONS OF NEPHROLOGY	
Theme 1.2	Growth and Development	
Learning Objective 1.2.2	Interpret somatic growth and renal disease	
Knowledge	Skills	
<ul style="list-style-type: none"> describe factors that contribute to impaired body growth in children with renal disorders and chronic kidney disease (CKD) recognise the relationship between body growth and renal function describe normal pubertal growth and how this may be influenced by kidney disease describe approaches to the management of pubertal delay describe the indications, use, risks and expected outcomes of recombinant human growth hormone (rhGH) for children with CKD. 	<ul style="list-style-type: none"> interpret growth patterns in children with kidney disease. 	

DOMAIN 1	FOUNDATIONS OF NEPHROLOGY	
Theme 1.2	Growth and Development	
Learning Objective 1.2.3	Recognise and evaluate developmental issues of children with renal disease	
Knowledge	Skills	
<ul style="list-style-type: none"> describe the factors influencing neurodevelopment in children with kidney disease identify normal development patterns and recognise developmental delay discuss strategies used to assess and minimise developmental delay describe the psychological impacts of CKD on children and their families. 	<ul style="list-style-type: none"> evaluate developmental delay. 	

DOMAIN 1		FOUNDATIONS OF NEPHROLOGY	
Theme 1.3		Diagnostic Methods	
Learning Objective 1.3.1		Interpret a biopsy in renal medicine	
Knowledge		Skills	
<ul style="list-style-type: none"> outline the technique of renal biopsy using the appropriate radiological imaging method e.g. ultrasound, CT describe indications for biopsy of native and transplant kidneys explain the anatomy of the native and transplant kidney recognise potential complications, incidence and risk minimisation techniques. 		<ul style="list-style-type: none"> assess when a biopsy is required interpret significant abnormalities on renal biopsies obtain informed consent for the procedure interpret and manage complications interpret the pathology of common glomerular diseases develop a management plan based on biopsy findings explain results to patients, their families and other health professionals involved 	
Minimum practical performance requirements		<ul style="list-style-type: none"> <i>An adequate number of native kidney and transplant renal biopsies under clinical supervision to achieve safe and independent procedural competence. 20 to 50 biopsies are suggested.</i> <i>Paediatric trainees can perform adult biopsies.</i> 	

DOMAIN 1		FOUNDATIONS OF NEPHROLOGY	
Theme 1.3		Diagnostic Methods	
Learning Objective 1.3.2		Use and interpret imaging in renal medicine	
Knowledge		Skills	
<ul style="list-style-type: none"> describe the variety of imaging modalities including their strengths limitations, indications and complications explain risks of imaging including ionising radiation, contrast and gadolinium toxicity in patients with CKD describe the modalities of antenatal imaging recognise the impact of radiation exposure and choose imaging modality for at risk groups including children and pregnant women 		<ul style="list-style-type: none"> use imaging for patient management including: <ul style="list-style-type: none"> plain radiological imaging (interventional and non-interventional) ultrasound nuclear medicine scans computed tomography angiography and fluoroscopy antegrade and retrograde pyelography magnetic resonance imaging assess the risk of imaging modalities against their utility. 	
<ul style="list-style-type: none"> describe local imaging recommendations for conditions such as urinary tract infection (UTI), antenatal hydronephrosis. 			

DOMAIN 1	FOUNDATIONS OF NEPHROLOGY	
Theme 1.3	Diagnostic Methods	
Learning Objective 1.3.3	Use and interpret pathology tests in renal medicine	
Knowledge	Skills	
<ul style="list-style-type: none"> explain normal and age appropriate ranges recognise the range and application of the biochemical, haematological, microbiological and immunological laboratory tests involved in the clinical practice of nephrology. 	<ul style="list-style-type: none"> use and interpret pathology tests formulate a management plan based on investigation results plan timing of future tests explain results and follow up where required perform urine microscopy and interpret urine sediment. 	

DOMAIN 1	FOUNDATIONS OF NEPHROLOGY	
Theme 1.4	Therapeutics	
Learning Objective 1.4.1	Explain the principles of drug prescription in renal medicine	
Knowledge	Skills	
<ul style="list-style-type: none"> describe the interrelationship between drug dosing to GFR and age using Cockcroft–Gault equation (CG) or eGFR equation describe the principles of therapeutic drug monitoring with reference to various dialysis modalities and/or clinical states of altered volume of distribution e.g. nephrotic syndrome identify the toxicity of certain agents in CKD discuss important drug interactions identify principles of pain management in patients with CKD/end stage kidney disease (ESKD) describe the role of therapeutic drug level monitoring in renal medicine. 	<ul style="list-style-type: none"> use electronic databases to determine drug dosing including: <ul style="list-style-type: none"> Monthly Index of Medical Specialties (MIMS) paediatric drug pharmacopeia prescribe common medications to CKD patients safely adjust drug doses according drug levels. 	

DOMAIN 1	FOUNDATIONS OF NEPHROLOGY	
Theme 1.5	Epidemiology and Research	
Learning Objective 1.5.1	Explain the epidemiology of renal disease	
Knowledge	Skills	
<ul style="list-style-type: none"> outline the impact of renal disease on local and global environments recognise the prevalence and aetiology of renal disease that is endemic in Aboriginal and Torres Strait Islander, Maori and Pacific Islander peoples recognise the affliction of renal disease across different age groups identify local and international strategies to improve diagnosis and prognosis by opportunistic and at risk screening and early intervention describe the role, mechanisms and use of Australia and New Zealand Dialysis and Transplant Registry (ANZDATA) and international data registries discuss the risk factors for kidney disease. 	<ul style="list-style-type: none"> identify at risk individuals or groups apply the epidemiology of renal disease to clinical practice assess when to screen for renal disease, including the use of urine microscopy and dipstick analysis describe the collection process and interpretation of urine microscopy. 	
Minimum practical performance requirements	<ul style="list-style-type: none"> 20 urine microscopies* <p><i>* NOTE: highly desirable skill - in a unit where this not routinely performed/ equipment not available trainees encouraged to visit the pathology laboratory to gain knowledge of this technique.</i></p>	

DOMAIN 1		FOUNDATIONS OF NEPHROLOGY	
Theme 1.5		Epidemiology and Research	
Learning Objective 1.5.2		Discuss current science and research in nephrology	
Knowledge		Skills	
<ul style="list-style-type: none"> describe research methodology recognise various groups coordinating and performing research in Australia and New Zealand e.g. Australian and New Zealand Society of Nephrology (ANZSN) and Transplantation Society of Australia and New Zealand (TSANZ) describe the functioning of national and international renal databases such as ANZDATA explain the roles of the Dialysis Nephrology and Transplantation (DNT) subcommittee and Caring for Australasians with Renal Impairment (CARI) guidelines in promoting evidence-based practice recognise the main bodies involved in communicating research and public health campaigns to the community, e.g. Kidney Health Australia and Department of Health and Ageing recognise the Australasian Kidney Trials Network (AKTN) proposed and current studies and the rationale of these studies. 		<ul style="list-style-type: none"> critically appraise a journal article formulate, design and complete a research project that is peer reviewed and presented as a poster or oral presentation at a national or international scientific meeting organise research program for non-core Advanced Training period use current national and international guidelines (e.g. CARI) recognising their strengths and limitations. 	

DOMAIN 2		DISEASES OF THE KIDNEYS AND URINARY TRACT	
Theme 2.1		Common Clinical Presentations	
Learning Objective 2.1.1		Assess and manage proteinuria	
Knowledge		Skills	
<ul style="list-style-type: none"> explain quantitation, classification and risk stratification of proteinuria and albuminuria explain the aetiology of proteinuria describe the relationship between proteinuria and other renal presentations explain when to perform a renal biopsy for proteinuria differentiate between pathological and postural proteinuria identify the prognostic associations of albuminuria and proteinuria (i.e. cardiovascular disease and risk of progression of renal impairment) describe the advantages and disadvantages of spot urine and timed urine in the assessment of proteinuria. 		<ul style="list-style-type: none"> perform a clinical assessment in a patient presenting with proteinuria assess the histological changes on a renal biopsy specimen formulate and discuss a management plan including pharmacologic and nonpharmacologic antiproteinuric measures. 	

DOMAIN 2		DISEASES OF THE KIDNEYS AND URINARY TRACT	
Theme 2.1		Common Clinical Presentations	
Learning Objective 2.1.2		Assess and manage haematuria	
Knowledge		Skills	
<ul style="list-style-type: none"> recognise the interrelationship between haematuria and other renal presentations identify causes of microscopic and macroscopic haematuria recognise the role and limitations of urine microscopy describe the pathologic and clinical features of thin basement membrane disease. 		<ul style="list-style-type: none"> assess and investigate a patient presenting with haematuria perform urine microscopy and distinguish between non-glomerular and glomerular haematuria, including recognising red cell casts assess when a patient requires urological evaluation assess a patient for a renal biopsy formulate a management plan and follow up explain the likely outcome and requirements for patients, families and other health professionals. 	

DOMAIN 2	DISEASES OF THE KIDNEYS AND URINARY TRACT	
Theme 2.1	Common Clinical Presentations	
Learning Objective 2.1.3	Assess and manage abnormal glomerular filtration rate	
Knowledge	Skills	
<ul style="list-style-type: none"> discuss the use and limitations of GFR measurements and eGFR corrected for body surface area assess a patient with an abnormal GFR explain the ageing process in relation to reduction in eGFR recognise that the rate of decline in GFR is not universal and may depend upon the aetiology of the renal disease and comorbidities. 	<ul style="list-style-type: none"> distinguish between acute and chronic renal injury formulate a rational plan to investigate a patient with an abnormal eGFR/GFR assess the rate of change of eGFR/GFR in a patient with reducing renal function (+/- associated abnormalities of urinalysis) and plan their care. 	

DOMAIN 2	DISEASES OF THE KIDNEYS AND URINARY TRACT	
Theme 2.1	Common Clinical Presentations	
Learning Objective 2.1.4	Assess and manage chronic kidney disease	
Knowledge	Skills	
<ul style="list-style-type: none"> describe chronic kidney disease (CKD), including: <ul style="list-style-type: none"> definition and staging according to GFR and urinary/anatomical abnormalities aetiologies manifestations, risk stratification and complications according to stage available treatment options identify strategies for preservation of renal function. 	<ul style="list-style-type: none"> assess and investigate a patient with CKD for causes and complications manage and educate a patient with CKD including: <ul style="list-style-type: none"> lifestyle and diet anaemia management, including use of erythropoietin CKD-mineral bone disorder (MBD) including calcium/phosphate/PTH and vitamin D control fluid and electrolyte abnormalities hypertension minimisation of risk factors for vascular disease planning for endstage renal disease management. 	

DOMAIN 2		DISEASES OF THE KIDNEYS AND URINARY TRACT	
Theme 2.1		Common Clinical Presentations	
Learning Objective 2.1.5		Assess and manage nephrotic syndrome	
Knowledge		Skills	
<ul style="list-style-type: none"> recognise and identify the causes of nephrotic syndrome, including the complications and prognosis explain treatment options for nephrotic syndrome, including: <ul style="list-style-type: none"> diuretic therapy fluid restriction angiotensin converting enzyme inhibitors/angiotensin receptor blockers (ACEI/ARB) anticoagulation lipid lowering therapy immunosuppression describe the causes and natural history of nephrotic syndrome considering: <ul style="list-style-type: none"> histology genetics differential diagnosis in different age groups nephrotic syndrome as part of systemic disease identify nephrotic syndrome, including indications for renal biopsy and genetic studies explain evidence based treatment options for nephrotic syndrome explain the implications for transplantation, including recurrence risks identify complications of immunosuppressive therapy 		<ul style="list-style-type: none"> investigate a patient presenting with nephrotic syndrome institute a management plan organise a plan for investigation and management interpret a renal biopsy for the common lesions causing nephrotic syndrome in children, including: <ul style="list-style-type: none"> minimal change disease focal segmental glomerulosclerosis (FSGS) membranoproliferative glomerulonephritis (GN) diffuse mesangial sclerosis systemic lupus erythematosus (SLE) assess and manage complications manage immunosuppression, diuretics, ACEI/ARB, statins. 	
<ul style="list-style-type: none"> describe the causes of nephrotic syndrome considering renal histology and differential diagnosis in different age groups describe indications for referral for genetic studies 		<ul style="list-style-type: none"> interpret a renal biopsy for the common lesions causing nephrotic syndrome including: <ul style="list-style-type: none"> membranous nephropathy diabetes focal glomerulosclerosis minimal change disease systemic lupus erythematosus (SLE) light chain disease amyloidosis. 	
<ul style="list-style-type: none"> describe growth and childhood complications of therapies. 			

DOMAIN 2	DISEASES OF THE KIDNEYS AND URINARY TRACT	
Theme 2.1	Common Clinical Presentations	
Learning Objective 2.1.6	Investigate and manage renal emergencies	
Knowledge	Skills	
<ul style="list-style-type: none"> describe the potential presentations of renal emergencies, including: <ul style="list-style-type: none"> acute kidney injury (AKI) and rapidly progressive glomerulonephritis acidosis sodium, potassium and calcium disturbances hypertensive emergency fluid overload access problems. 	<ul style="list-style-type: none"> formulate an investigation and management plan for the renal emergencies listed opposite initiate prescription of acute dialysis, including for management of certain drug overdoses or toxicities such as: <ul style="list-style-type: none"> lithium digoxin salicylic acid theophylline. 	

DOMAIN 2	DISEASES OF THE KIDNEYS AND URINARY TRACT	
Theme 2.1	Common Clinical Presentations	
Learning Objective 2.1.7	Assess and manage patients with acute kidney injury	
Knowledge	Skills	
<ul style="list-style-type: none"> describe acute kidney injury (AKI) and its staging describe the causes and clinicopathological presentations of AKI explain the potential long term impact of AKI on kidney function identify indications for acute dialysis and the role of different renal replacement therapies describe the implications of drug dosing in AKI identify the implications of AKI on the management of other comorbidities 	<ul style="list-style-type: none"> assess and investigate a patient presenting with AKI, including identifying the role of kidney biopsy evaluate and manage fluid status in a patient with AKI assess and manage patients with all degrees of severity of AKI and its aetiologies manage acute electrolyte abnormalities prescribe acute renal replacement therapy prescribe plasmapheresis or plasma exchange manage the recovery phase of AKI including the management of a post obstructive diuresis 	
<ul style="list-style-type: none"> recognise the definitions and staging of AKI in children and neonates describe the epidemiology and pathophysiology of AKI in neonates and children discuss the considerations for conservative and renal support therapy, including choice of modality in children with AKI. 	<ul style="list-style-type: none"> evaluate fluid status manage paediatric patients with AKI.

Learning Objective 3.1.1	Assess potential transplant recipients
Knowledge	Skills
<ul style="list-style-type: none"> recognise the importance of thorough evaluation of a potential recipient with understanding of relative and absolute contraindications to transplantation identify the advantages and disadvantages of deceased donor versus live donor describe the transplant limitations imposed due to the relative lack of deceased donor kidneys in Australia and NZ identify graft and patient survival data and review outcomes from standard and extended criteria donors. 	<ul style="list-style-type: none"> evaluate a potential recipient including screening and management of comorbidities assess diseases precluding transplantation including cancer, severe cardiac disease, metabolic disease and severe respiratory disease assess viral status and planning of prophylaxis including cytomegalovirus (CMV), HIV, hepatitis B and C assess and manage bone status assess blood group, human leukocyte antigen (HLA) testing and sensitisation and how this impacts on graft waiting times and outcomes plan immunosuppression carefully and thoroughly work through a unit protocol and report findings to transplant team members evaluate urinary tract and bladder function in patients with congenital urological disease discuss the benefits and disadvantages of different options for a patient with an incompatible live donor including Paired Kidney Exchange Scheme (PKES), ABO incompatible and desensitisation assess whether to accept a donor organ offered to a patient.

DOMAIN 3	TRANSPLANTATION	
Theme 3.1	Kidney Transplants	
Learning Objective 3.1.2	Assess potential live transplant donors	
Knowledge	Skills	
<ul style="list-style-type: none"> explain that rigorous screening of a potential live donor must be completed to proceed to donation describe principles and results of tissue typing identify contraindications to live donation recognise the impact of donating a kidney on the donor describe donor outcome studies recognise the importance of clinical separation of responsibility for the donor and recipient outline current data recorded by ANZDATA living kidney donor registry. 	<ul style="list-style-type: none"> assess a potential donor using local transplant unit criteria counsel a potential donor using data from outcome studies assess when a potential donor requires specialist referral e.g. psychiatric, cardiac, and anaesthetic assessment follow up a transplant donor. 	

DOMAIN 3	TRANSPLANTATION	
Theme 3.1	Kidney Transplants	
Learning Objective 3.1.3	Prescribe immunosuppressants and recognise complications	
Links	Learning Objective 1.1.7	
Knowledge	Skills	
<ul style="list-style-type: none"> describe the major histocompatibility complex (MHC) describe the process of tissue typing and crossmatching describe techniques of crossmatching e.g. luminex testing explain the different types of immunosuppressives used in transplantation including their short and long-term side effects describe determinants of adherence recognise particular effects of immunosuppression in children. 	<ul style="list-style-type: none"> interpret tissue typing reports prescribe and monitor effects of immunosuppressives, including therapeutic drug monitoring safely modify immunosuppressive regimen according to patient profile monitor for long term side effects of immunosuppression in patients counsel to ensure adherence. 	

DOMAIN 3	TRANSPLANTATION
Theme 3.1	Kidney Transplants
Learning Objective 3.1.4	Acute transplant management

Knowledge	Skills
<ul style="list-style-type: none"> describe the structure and function of the organ donor service program and its strengths and limitations organise an acute transplant and manage chronic stable transplant patients describe the histology of acute rejection, including the Banff classification and the changes of humoral (antibody mediated) rejection assess offer of a particular diseased donor offered to their patient for transplantation. 	<ul style="list-style-type: none"> organise and manage an acute transplant, including: <ul style="list-style-type: none"> preparation of a patient perioperative management planning and use of immunosuppression, particularly understanding side effects of commonly used drugs (calcineurin inhibitors (CNI), glucocorticoids, mammalian target of rapamycin (mTOR) inhibitors, antimetabolites and monoclonal antibodies) manage early surgical problems manage a suspected rejection identify and manage post-transplant diabetes in the early post-transplant period identify potential side effects of drugs screen and manage patients with BK nephropathy manage age and disease-specific peri operative risks, including: <ul style="list-style-type: none"> graft thrombosis fluid management disease recurrence e.g. focal segmental glomerulosclerosis (FSGS).

Minimum practical performance requirements	<ul style="list-style-type: none"> Acute transplant: participation in 12 acute renal transplants over two years of core training. Acute renal transplantation is defined as participation in the peri-operative and early outpatient (first three months) care of transplant recipients. Chronic transplantation: 48 episodes of contact with a minimum of 24 different chronic (more than three months post transplantation) renal transplant recipients.
---	--

DOMAIN 3	TRANSPLANTATION
Theme 3.1	Kidney Transplants
Learning Objective 3.1.5	Manage the long term care of a transplant recipient
Knowledge	Skills
<ul style="list-style-type: none"> • explain the principles of maintaining health in a transplant recipient, including: <ul style="list-style-type: none"> • regular outpatient review • counselling regarding healthy lifestyle • use of pharmacotherapy for treatment of cardiovascular risk factors • coordinate multidisciplinary care of renal transplant recipients • discuss the rationale and limitations of protocol biopsies in renal transplantation • describe the Banff histological classification of acute rejection • describe the histological changes seen in transplant glomerulopathy, calcineurin inhibitor toxicity and BK nephropathy • discuss the limitations of renal transplantation, graft failure and timing of dialysis recommencement. 	<ul style="list-style-type: none"> • manage ambulatory transplant patients, including: <ul style="list-style-type: none"> • therapeutic drug monitoring • cardiovascular risk • skin diseases • malignancy surveillance • infection e.g. Epstein-Barr virus (EBV), cytomegalovirus (CMV), BK • vaccination • growth in children • post-transplant bone disease • identify and manage post-transplant diabetes in the early post-transplant period • manage acute rejection • manage a failing graft, including timing of withdrawal of immunosuppression • manage fertility issues in transplant recipients.

Glossary of Acronyms and Initialisms

ACEI/ARB	Angiotensin converting enzyme inhibitors/angiotensin receptor blockers
ADPKD	Autosomal dominant polycystic kidney disease
AKI	Acute kidney injury
ANA	Anti-nuclear antibody test
ANCA	Anti-neutrophil cytoplasmic autoantibodies
anti-GBM	Anti-glomerular basement membrane autoimmune disease
AN	Adriamycin nephrosis
ANZDATA	Australia and New Zealand Dialysis and Transplant Registry
ANZOD	Australia New Zealand Organ Donor Registry
APD	Automated Peritoneal Dialysis
ARF	Acute renal failure
ARPKD	Autosomal recessive polycystic kidney disease
AVF	Arteriovenous fistula
BP	Blood pressure
CARI	Caring for Australians with Renal Impairment guidelines
CAKUT	Congenital abnormalities of kidney and urinary system
CAPD	Continuous Ambulatory Peritoneal Dialysis
CG	Cockcroft–Gault equation
CKD	Chronic kidney disease
CMV	Cytomegalovirus
CNI	Calcineurin inhibitors
CVC	Central Venous Catheter
CVVH	Continuous veno-venous hemofiltration
CVVHD	Continuous veno-venous dialysis
CVVHDF	Continuous veno-venous hemodiafiltration
DMSA	Dimercaptosuccinic acid
dsDNA	Double Stranded DNA
DTPA	Diethylene triamine pentaacetic acid

Glossary of Acronyms and Initialisms

EBV	Epstein-Barr virus
EDTA	Ethylene diamine tetraacetic acid
eGFR	Estimated glomerular filtration rate
ENA	Extractable nuclear antigens
ESKD	End stage kidney disease
FSGS	Focal segmental glomerulosclerosis
GBM	Glomerular Basement Membrane
GFR	Glomerular filtration rate
GN	Glomerulonephritis
HD	Haemodialysis
HLA	Human leukocyte antigen testing
HUS/TTP	Haemolytic-uraemic syndrome/thrombotic thrombocytopenic purpura
HT	Hypertension
IF	Immunofluorescence
LM	Light-microscopy
LVH	Left ventricular hypertrophy
MAG-3	Mercapto acetyl tri glycine scan
MBD	Mineral bone disorder
MCDK	Multicystic dysplastic kidneys
MHC	Major histocompatibility complex
MCU	Micturating cystourethrogram
MIMS	Monthly Index of Medical Specialties
MSU	Mid-stream urine
mTOR Inhibitors	Mammalian target of rapamycin inhibitors
nPNA	Normalised protein nitrogen appearance
PAN	polyarteritis nodosa
PD	Peritoneal dialysis
PET	Positron emission tomography

Glossary of Acronyms and Initialisms

PKE	Paired Kidney Exchange Scheme
PSA	Prostate specific antigen
PTH	Parathyroid hormone
RAS	Renal artery stenosis
RhF	Rheumatoid Factor
rhGH	Recombinant human growth hormone
RRT	Renal replacement therapy
RTA	Renal tubular acidosis
SCC	Squamous cell carcinomas
SIADH	Syndrome of inappropriate antidiuretic hormone secretion
SLE	Systemic lupus erythematosus
TCC	Transitional cell carcinomas
U/A	Urinalysis
USS	Ultrasound scan
UTI	Urinary tract infection
