**GLOBAL ACTION PLAN  
ON ANTIMICROBIAL  
RESISTANCE**

 **AURORA**  
Antimicrobial Use and Resistance in Australia

Resistance is driven by high rates of antibiotic prescribing

**Emerging  
evidence in  
gut  
microbiota**

**Lower  
threshold for  
prescribing**

**Resistant  
strains  
spread in  
community**

**Large  
consumer of  
antibiotics**

**Lifetime  
exposure**

## **Research Question:**

What are the antibacterial prescription patterns for the paediatric population within the primary care setting?

---

### **Aim 1:**

To describe antibacterial prescription patterns for children in primary care over time

### **Aim 2:**

To identify appropriate prescribing behaviours and sources for potential improvement

## Children with systemic features

For children with systemic features (high fever, vomiting or lethargy), use:

amoxicillin 15 mg/kg up to 500 mg orally, 8-hourly for 5 days

OR (for patients suspected to be nonadherent)

amoxicillin 30 mg/kg up to 1 g orally, 12-hourly for 5 days.

Patients who have an inadequate response to amoxicillin therapy within **48 to 72 hours** may have infection caused by a beta-lactamase-producing strain of *H. influenzae* or *M. catarrhalis*; adding clavulanate provides increased activity against these pathogens. Use:

amoxicillin+clavulanate 22.5+3.2 mg/kg up to 500+125 mg orally, 8-hourly for 5 to 7 days.

## Take home messages

- Antibiotic prescribing rates are decreasing
- Broad spectrum usage is decreasing
- Scope for interventions in prescribing software
- Default settings
- Stewardship strategies

## Future Directions

- Largest antibiotic prescribing study performed on Australian children in the community to date
- Data linkage with hospital discharge data

# AFPHM Competency

---

<b>DOMAIN 3</b>	<b>INFORMATION, RESEARCH AND EVALUATION</b>	
<b>Theme 3.1</b>	Public Health Information and Critical Appraisal	
<b>Learning Objective 3.1.6</b>	Use suitable information sources to describe the health of populations	Level 2
<b>Elements of competence</b>		
<ul style="list-style-type: none"><li>• access and use information sources, such as census and other demographic information, health sector data (including morbidity and mortality data), survey data, measures of health status and measures of socioeconomic and health inequality</li><li>• use descriptive epidemiological analysis (time, place, person)</li><li>• use suitable statistical techniques and appropriate spreadsheet, database and analysis software.</li></ul>		

# AUSTRALIAN COMMISSION ON SAFETY AND QUALITY IN HEALTH CARE

## Australian Atlas of Healthcare Variation Series

# Choosing Wisely Australia

An initiative of NPS MedicineWise

<b>Learning Objective 3.1.8</b>	Advise on health and public health information systems	Level 2
<b>Elements of competence</b>		
<ul style="list-style-type: none"> <li>advise on role of health information systems, registers, electronic patient records, disease coding, information quality, information privacy, information security, informatics and information and communications technology (ICT) developments.</li> </ul>		

<b>DOMAIN 3</b>	<b>INFORMATION, RESEARCH AND EVALUATION</b>	
<b>Theme 3.3</b>	Health Care and Public Health Program Evaluation	
<b>Learning Objective 3.3.2</b>	Implement results of evaluations to improve health services and public health programs	Level 1
<b>Elements of competence</b>		
<ul style="list-style-type: none"> <li>utilise research evidence on factors which produce changes in clinical behaviour, public health and managerial practice</li> <li>identify potential barriers and implement strategies to address these</li> <li>work with others to implement evaluation results.</li> </ul>
