

RACP Guide for Choosing Relevant and Valuable CPD Activities

This guide has been developed to assist RACP CPD participants in Australia and Aotearoa New Zealand with assessing the suitability of CPD activities, to ensure that they:

- ✓ address the CPD participant's learning and professional development needs
- ✓ are relevant to the regulatory and program level requirements of the CPD Framework
- ✓ are relevant to the CPD participant's role or professional development objectives
- ✓ provide educational value

CPD participants include RACP Fellows, CPD users (non-members), and CPD interrupted trainees.

Access the CPD Framework for details of the regulatory and program level requirements.

General guidelines for assessing all CPD activities All CPD activities should be assessed against the following guidelines for relevance and educational value.				
Relevance	Does the CPD activity address current and relevant issues in your specialty,	Consider factors such as clinical and professional relevance,		
	role or scope of practice?	applicability to daily practice, and potential impact on patient outcomes.		
	Is the activity relevant to the CPD requirements, and will completion of this			
	activity support you towards meeting those requirements?	Also consider relevance to the CPD requirements to ensure completion of this activity will		
	Will the activity support development across the domains in the RACP's Professional Practice Framework?	support you in meeting these requirements (refer also to the additional guidelines for specific requirements below).		
Educational Value	Learning objectives:	Considering these factors will		
	Are the CPD activity's learning objectives clearly defined?	ensure you are better informed to decide whether the activity will be a valuable use of your		
	Do the learning objectives explain what you will gain from the activity and how it will enhance your knowledge and skills?	time, will have a positive impact on your professional development, and that you will gain the intended knowledge and skills.		
	Do the learning objectives align with your professional development needs and/or any areas identified in your Professional Development Plan (PDP)?			

Evidence based: Is the content of the CPD activity based on sound evidence and up-to- date research?	You should engage with content that is grounded in evidence-based practices, ensuring the accuracy and reliability of the information. Consider the credentials of presenters/facilitators, currency of publication, sources, and discuss the activity with peers for their input.
Educational design and methodology: Does the CPD activity employ effective adult learning principles and methodologies which suit your learning style, and will facilitate the broadening of your medical knowledge and professional skills?	Well-designed CPD activities (such as online courses) with interactive elements, case studies, and practical applications can enhance the learning experience and engagement.
Applicability and implementation: Will the CPD activity promote implementation of new knowledge? How easily will you be able to apply the knowledge and skills gained into your practice?	CPD activities should have a lasting impact on your knowledge, skills and professional competence. Practical applicability will enhance the impact of the activity.
Reflection and impact: Will the CPD activity promote critical reflection? How will the CPD activity contribute to your professional growth and development?	Reflecting on your existing knowledge, what you've learnt, and how you plan to implement the new knowledge, will positively contribute to your professional development.
Assessment of provider: Is the CPD activity either developed or provided by: • the RACP or is it an RACP verified activity*? • another accredited CPD home • a respected provider of health education	Consider the professional reputation and credibility of the provider of the CPD activity. A provider with a strong professional reputation is more likely to offer high-quality CPD activities, with content that is up-to-date, and aligns with best practice and professional standards.

Additional guidelines for assessing activities relating to specific requirements

The following additional guidelines should assist CPD participants with assessing an activity's relevance and value against certain regulatory and program level requirements.

Reviewing performance (Category 2):

Does the CPD activity facilitate the opportunity to review your performance and/or gain feedback, either through peer discussion or patient feedback, and to identify areas where you may improve or change your practice?

Are the peers/colleagues providing feedback sufficiently skilled and experienced to assist you to critically review your performance and to identify potential areas for change?

Reviewing performance includes activities that, formally or informally, critically appraise, assess and monitor doctors' actual work processes. Reviewing performance, peer discussions and constructive feedback help doctors reflect on their practice, identify improvements and reinforce learning.

Measuring outcomes (Category 3):

Does the CPD activity provide an opportunity to measure patient or health outcomes, facilitating analysis of the information gathered, in order to identify steps or actions which can improve patient care and health outcomes? Measuring outcomes activities should entail a quality improvement process involving reviewing your work, considering what you are doing well, where you can improve, and how you can implement those improvements.

Cultural safety:

Does the CPD activity provide an opportunity for you to engage in education on cultural awareness, cultural competence or cultural safety? Does it facilitate critical self-reflection of your own biases, power and practicing behaviours?

Does the CPD activity provide an opportunity for you to reflect on your interactions with Indigenous patients, and build awareness of your own position of power and biases, and how these may impact patient care? Cultural Safety is one of the ten domains of professional practice in the RACP's Professional Practice Framework. Doctors should engage in activities that bring cultural safety into focus, and enhance their understanding of cultural safety and what it means for them as a practitioner. This may begin with building your understanding of Aboriginal, Torres Strait Islander and Māori peoples and cultures, the issues faced by these populations, and the skills to function effectively and respectfully when working with Indigenous peoples. Critical reflection is paramount, as it allows you to recognise your own biases, assumptions, and the need to minimise power differentials, allowing you to approach interactions with Indigenous peoples and communities with greater understanding and respect.

Addressing health inequities:

Does the CPD activity have a focus on health equity issues (i.e. colonialism, social determinants of health, racism etc.) relevant to your practice and patient population?

Does the activity encourage critical selfreflection on your position in the environment Understanding the broader social and economic factors influencing health is crucial for addressing health equity issues effectively. Learn about the barriers to accessing care and achieving equitable health outcomes, and what you can do to reduce these barriers. Exploring methods for measuring health outcomes and evaluating the impact of interventions on

in which you work, and facilitate recognition of how sources of inequity relate to health disparities?	reducing health disparities is recommended for addressing issues of health equity in your practice. This is expected to provide benefits for patients and communities from all diverse backgrounds, including Indigenous status, age, gender, sexual orientation, socioeconomic status, ethnicity, religious or spiritual belief and disability.
Ethics and professional behaviour: Does the CPD activity address or highlight ethical and professional issues that are relevant to your daily practice? Does the activity encourage self-reflection and self-assessment of your own ethical and professional practices, and facilitate improvements to your ethical decision making and professional conduct?	Ethics and professional behaviour is one of the ten domains of professional practice in the RACP's Professional Practice Framework. A doctor's practice should be founded upon ethics, and doctors should demonstrate their commitment and accountability to the health and well-being of individual patients, communities, populations and society through ethical practice. Reflective practice promotes self-awareness and continuous improvement in ethical decision-making and professionalism.

Supporting Resources

In addition to the guidelines outlined in this Guide, it is strongly recommended that CPD participants regularly review the following documents throughout the CPD year. This will help ensure that professional development plans and CPD activities are relevant, provide educational value, address key areas of need, and align with regulatory and program-level requirements.

CPD Framework

MyCPD Handbook – in particular, the following pages within the Handbook all provide information, examples and links to the types of activities that are relevant to the program requirements:

- CPD Resources
- ➤ Tools & Templates
- Embedding cultural safety, ethics and professional behaviour in CPD activities

RACP Professional Practice Framework

Medical Council of New Zealand - Good Medical Practice Guidelines

*Definition of RACP CPD Verified Activities

Verified activities are CPD activities recorded on behalf of a Fellow within the RACP MyCPD system and verified for audit purposes at the time of recording.

Participating in RACP CPD verified activities ensures the recording of the activity in the MyCPD record in real time, and the activity will not require audit evidence if the Fellow is later selected for audit.

This streamlined process reduces the administrative burden for Fellows so they can focus on completion of the CPD activities untaken either through the RACP or with Specialty Societies that are a part of the RACP's CPD recording pilot. This means that the activity has been accepted as evidence of the activities undertaken and their educational quality and relevance.

While we aim for accuracy, Fellows remain responsible for reviewing their MyCPD record to ensure alignment with annual CPD requirements.
