NOW...10 Months Scientific Evidence For Chesterfield

A MEDICAL SPECIALIST is making regular bi-monthly examinations of a group of people from various walks of life. 45 percent of this group have smoked Chesterfield for an average of over ten years.

After ten months, the medical specialist reports that he observed . . .

no adverse effects on the nose, throat and sinuses of the group from smoking Chesterfield.

Ending the abuse of children on Nauru: We must be better than this

Date published: 18 Aug 2016

We didn't need more evidence of the terrible harms of detention, but we received it last Wednesday. Yet again the Australian public was confronted with thousands of examples of the daily trauma of life in the Nauru detention centre - incidents of child abuse, assault, sexual abuse and self-harm.
